

POLICY BRIEF: World Contribution Circulation Council (WCCC)

A New Protocol for AI Era: Turning Every AI Token into Global Contribution

Submitted by: OSS-Wee Initiative | Contact: OSS-Wee Community | Date: May 2026 | For: UNDP, UNESCO, UN Office of the Envoy on Technology

1. EXECUTIVE SUMMARY

AI is built on humanity's collective intelligence, yet its benefits are concentrated. WCCC proposes a global protocol where **every AI token used automatically generates a micro-contribution (Tama)** to creators, the public good, and the future. Collection is done by **sovereign states** under national law; management, auditing and allocation rules are overseen by a **UN-hosted transparent body (WCCC)**. Users remain free to choose any AI model (US, China, EU, Japan, etc.). This transforms AI competition from 'performance-only' to 'contribution-based' symbiosis.

2. THE PROBLEM

- **Invisible Contributions:** Small code, translations, typo fixes, ideas are consumed without recognition or return.
- **Concentration of Wealth:** Value from global collective knowledge flows to few corporations.
- **AI Colonialism Risk:** Nations without frontier models are left as pure consumers.
- **Lack of Global Public Goods Funding:** No sustainable mechanism to fund education, climate, and AI infrastructure in the Global South.

3. THE SOLUTION: THREE-LAYER CIRCULATION MODEL

Layer	Actor	Function	Principle
We Choose	Individuals	Free choice of any AI model	Market Freedom & Competition
We Collect	Nation States	Micro-levy on AI token usage (Tama Tax) - counts	Sovereignty & Priority
We Circulate	UN WCCC	Manages global fund, audits logs via blockchain	Transparency & Neutrality

Allocation Model (Example): 40% to Original Creators (proven via Mirror), 30% to Global Public Fund (education, safety, Global South AI infra), 20% to Community (improvers, translators, auditors), 10% to WCCC Operation.

4. TTT FRAMEWORK - A Japanese Philosophy for Global Governance

WCCC is grounded in TTT (Three Sacred Treasures) structure: **Mirror (Kagami)** = Transparency & auditability of AI usage logs; **Jewel (Tama)** = Accumulation of gratitude points as value; **Sword (Tsurugi)** = Enforcement against exploitation and unfair use. This provides a culturally neutral, ethical foundation.

5. WHY NOW? ALIGNMENT WITH UN GOALS

- Directly implements **UN Global Digital Compact** (para 28-30 on AI governance & digital public goods)
- Supports **SDGs 4, 8, 9, 10, 17**: Quality Education, Decent Work, Industry & Innovation, Reduced Inequalities, Partnership
- Offers a non-coercive way to include China, US, EU in same contribution protocol without forcing model bans
- Protects copyright at scale through transparent attribution (Mirror), not through restrictive litigation

6. CALL TO ACTION

We request the UN to: **1)** Host a feasibility study for WCCC as a UN-affiliated multi-stakeholder council, **2)** Recognize 'Tama' as a pilot for Digital Public Goods contribution tracking, **3)** Convene a working group with member states, AI labs, and open-source communities to draft the **Back-Flow Open License (BFOL)**. The goal is not to create a 'World AI Tax' but a **new internet etiquette where using AI inherently gives back**.
